Education

BMS College of Engineering — Bangalore, India
B.E. in Artificial Intelligence and Machine Learning ***(CGPA: 8.98/10)*** — *Oct 2023 – Oct 2027*

Christ Junior College — Bangalore, India
PCM with Biology ***(Class XII: 86.6%)*** — *Jun 2021 – May 2023*

Projects

SyncSage – Full Stack AI Meeting Intelligence Platform | *React, FastAPI, LangChain*

- Built a **full-stack AI platform** for processing meeting audio/video from YouTube links and local uploads, with a responsive frontend for transcript exploration and insights visualization.
- Developed scalable **backend APIs using FastAPI** for media ingestion, transcription, summarization, and meeting intelligence workflows powered by **Whisper and LangChain**.
- Designed a **RAG pipeline with ChromaDB vector storage** to enable semantic search and interactive Q&A over meeting transcripts with low-latency retrieval.

Nodeflow – Workflow Automation Platform | *Next.js, React, tRPC, Inngest*

- Built a **node-based workflow automation platform inspired by n8n**, enabling users to visually design and execute workflows.
- Developed an interactive canvas using **React Flow** with drag-and-drop nodes, connections, and real-time state updates.
- Implemented a scalable backend with **tRPC, Inngest, and Prisma (PostgreSQL)** for type-safe APIs, background execution, and workflow persistence.

NeoDev – AI Website Builder | *Next.js, React, Inngest, E2B Sandbox, TRPC*

- Built an AI-powered website builder using **LLMs** to generate UI/code for web projects with rapid iteration workflows.
- Enabled real-time code execution using **E2B Sandbox**, allowing users to run projects fully in-browser.

Plant Disease Detection using Deep Learning | *Python, TensorFlow, Streamlit, Scikit-learn*

- Developed a **CNN-based image classification system** to automatically detect and classify **38 plant diseases** from leaf images, enabling rapid disease diagnosis for smart agriculture.
- Implemented an end-to-end pipeline including **data preprocessing, model training, evaluation** , achieving **95% validation accuracy** with strong precision, recall, and F1-score across disease classes.

Technical Skills

Languages: C++, C, JavaScript, Python
Frontend: HTML, CSS, Tailwind CSS, React, Next.js
Backend: Node.js, Express.js, FastAPI
Databases: MongoDB, MySQL, chromaDB
Developer Tools: Git, GitHub, Postman
Libraries: NumPy, pandas, Matplotlib, sklearn, keras, langchain, langgraph
